General description

The FLIR Si-series Plugin for FLIR Thermal Studio allows you to import acoustic images from the FLIR Si-series cameras to FLIR Thermal Studio, to edit and analyze them and to create advanced reports. With the plugin you have support for automatic fault classification, severity indication and recommended action for utility inspections, and estimation of leak volume and cost savings for air leaks. You can combine the acoustic images with thermal imaging in the same report.

The FLIR Si-series Plugin is available as a perpetual license and is compatible with all versions of FLIR Thermal Studio desktop software (Starter, Standard, and Pro)
